

On the Subject of Blinkstop

Oh god. Is this more Morse Code?

Count the number of times the status light shines before it has a long pause. Use the color that shone least frequently than the rest to figure out which code of symbols to input. Input this sequence before the next *new* sequence ends. After you have inputted the correct sequence, select the blank button to submit.

If the sequence is not inputted in time, and you have selected at least one button already, select the blank button exactly when the status light pauses to reset the input.

A strike will be recorded if an incorrect sequence is submitted, and the module will *not* reset the inputs.

# of flashes	Purple LFC	Cyan LFC	Yellow LFC	Multicolor LFC
30	1321231221	3231223221	3132132232	1213132111
33	3212123121	3212312323	1213111132	2233112332
37	1232321213	1212221223	2332332312	2321313122
39	3231212322	3213231223	2321123213	2132233231
42	3221212121	2221212112	1232321121	3231231221
44	2323131231	1211212332	1322121211	3212312122
