

## On the Subject of Tap Code

*Is this not Morse code?*

- This module can detect when it is tapped. Even on the status light!
- To solve the module, tap, to the module, a five letter word in tap code.
- To find the word, press and hold the module and it will tap a word in tap code, then find the word on the table.
- Holding the module will also reset any input.
- Move the amount of the last digit of the serial number in the direction according to the conditions below:

- If there is a zero in the serial number, move the amount of the sum of the serial number digits instead.
- If the first two characters of the serial number are... XX: Up, ##: Down, X#: Left, #X: Right. (# = Number, X = Letter)

	1	2	3	4	5
1	A	B	C	D	E
2	F	G	H	I	J
3	L	M	N	O	P
4	Q	R	S	T	U
5	V	W	X	Y	Z

- If you reach the end of the table, go back to the other side of the table.
- Each letter is represented by its row's number of taps, a pause, then its column's number of taps.
- The letter "K" is substituted with a "C" in tap code.
- When entering the answer, you will hear a click noise after each pause, which signals to resume entering in the answer. At the end, there will be another click noise. Tap again to submit your solution.
- Entering an incorrect word will result in a strike and the input is erased.
