

On the Subject of Addition

This is literally just addition. I have no idea why anybody thought that this would be fun, challenging, or interesting to put on a bomb.

If the text on the grey button next to the screen is not 'A', you are looking at a different module.

Compute the sum on the display and enter it using the numbered buttons to solve the module. Use the grey 'A' button to cycle through 10 numbers, the red 'C' button to clear your input, and the '+' button to submit it.

NOTE: Do not prepend '0's to your number. There will ALWAYS be 10 numbers.
