- This module functions similarly to Cheap Checkout, except the shopping list cannot be seen, and you work at a pet shop, with mainly birds.
- To figure out which birds they have, listen to the sounds that they make.
- Pressing the bar will cause the sound to play. You can use the arrow buttons to cycle through the five sounds.
- If the customer has paid enough money, input how much change they need with the buttons. However, if they have not paid enough (or somehow paid the exact amount), submit no change to tell the customer (because you're a monster).

The below table shows the bird species, the price, and their call. A call consists of three tones that can be high, medium, or low. Three medium tones can be heard whenever the clear button is pressed.
