# On the Subject of Quick Arithmetic

*We, extraordinary experts, defuse confusing, hustling, unabbrasive new games, undoubtably skilled.*

- This module will display 16 digits cycling, with a pause between each 8 digits. A small pause will be between the two.
- Take the difference between the two numbers and multiply it by the last digit of the serial number.
- Add the number of batteries and if your current number is above 100, then repeatedly subtract 100 until your number is below 100.
