# On the Subject of Forgetting This

Remembering one digit and not ten makes it ten times easier!

- Take the color and the base-36 digit for each stage.
- Once all non-ignored modules have been solved, 5 stage numbers will be shown on the module.
- Taking stage 1 as your current digit, for each stage displayed from top to bottom, modify your current digit with reference to the following table.

Color	If last stage isn't	Then replace current with
Cyan	Yellow	current + display
Magenta	Black	current + 0.5 * display, round down
Yellow	White	current + 2 * display
Black	Cyan	0.5 * (current + display), round up
White	Magenta	current − digit

- In the above table, current means the current digit, display means the displayed digit for stages shown in the display.
- Once operations of all 5 stages have been completed, submit the current digit to solve the module.

Ignore list

If there are less than 2 non-ignored module on the bomb, Forget This will disarm automatically.

- Cookie Jars
- Curel Purgatory
- Divided Squares
