On the Subject of Not Memory
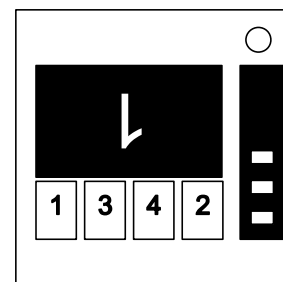

Memory is a annoying module but so is everything else on the bomb itself, so does it matter?

Press the correct button to disarm the module.

Only the <u>one</u> correct button need to be pressed to disarm the module.

Pressing an incorrect button will register a strike and reset the module.

Button positions are numbered from left to right.

<u>No lit LEDs:</u>

If the display is 1, press the button at the position of the second button's label.

Otherwise, if the first button is a 4, press the button with the same label as the display.

Otherwise, if the last digit of the Serial Number is odd, press the button labeled '1'.

Otherwise, press the button at the position of the display.
